Mumbai, Maharashtra, India

Summary

AI Engineer and Full-Stack Developer with hands-on experience building LLM-integrated applications and production ML pipelines. Developed a multi-agent Text-to-SQL system achieving **94% execution accuracy on the Spider benchmark**. Hackathon finalist (TechHorizon 2025, Smart India Hackathon). Proficient across the ML stack — Python, TensorFlow, Scikit-learn — and modern web stack — ReactJS, Flask, PostgreSQL. Graduating June 2026; seeking AI/ML engineering or full-stack software development roles.

Education

Sandip Institute of Technology and Research Centre (SITRC)

Nashik, Maharashtra

Bachelor of Engineering – Artificial Intelligence & Data Science

Aug 2022 – June 2026

• **CGPA: 8.21/10**

- Relevant Coursework: Machine Learning, Natural Language Processing, Database Management Systems, Cloud Computing, Data Structures & Algorithms, Human-Computer Interaction

Work Experience

Software Development Intern

May 2025 – Sep 2025

Chums AI

Remote – Mumbai, Maharashtra

- Built an AI-driven customer query classification platform using **Python, Flask, and PostgreSQL** with REST APIs, achieving **85%+ classification accuracy** across multiple query categories
- Designed and integrated REST APIs consumed by frontend clients; developed and improved UI components to enhance user experience and frontend responsiveness
- Implemented automation scripts for ML training pipeline orchestration and backend API testing, reducing manual QA effort significantly
- Collaborated with cross-functional teams on scalable, cloud-ready deployment architecture for production systems

Projects

Multi-Agent Text-to-SQL System | *Python, LangGraph, LLMs, PostgreSQL* | 🐙

Final Year Project

- Engineered a production-grade AI system to convert natural language queries into executable SQL using Large Language Models
- Designed a **multi-agent pipeline using LangGraph** with specialized agents for schema linking, query planning, and SQL generation with self-correction loops
- Achieved **94% execution accuracy on the Spider benchmark** — a widely recognized NL-to-SQL research benchmark — through iterative validation and correction mechanisms

AidConnect | *React, JavaScript, Python, MySQL, Llama 3.2* | 🐙

TechHorizon Hackathon 2025 – Finalist

- Built a donation logistics platform connecting shopkeepers directly with NGOs for in-kind goods delivery, eliminating cash-handling fraud by design
- Devised an **AI-powered vendor matching engine using Llama 3.2** that recommends optimal vendors based on geolocation proximity, real-time inventory, and historical NGO ratings
- Delivered a fully functional prototype within hackathon time constraints; **selected as finalist among 300+ participants** across teams

AI Resume Screening & Job Recommendation System | *Python, Scikit-learn, NLP, TF-IDF* | 🐙

- Developed an NLP pipeline to classify resumes by job category and recommend relevant roles using text preprocessing and TF-IDF vectorization
- Implemented cosine similarity-based matching to rank job descriptions against candidate profiles, improving recommendation relevance

Emergency Vehicle Alert Extension | *Python, Gradio, Hugging Face Transformers, Groq API* **Smart India Hackathon**

- Developed a browser extension that detects GPS/V2X signals and delivers real-time proximity alerts when emergency vehicles are nearby
- Integrated **Groq-accelerated LLM inference** for low-latency signal classification; built responsive UI with React.js aligned with modern UI/UX principles

Technical Skills

Languages & Databases: Python, JavaScript, SQL, MySQL, PostgreSQL, MongoDB, HTML5, CSS3
Frameworks & Libraries: React.js, Node.js, Flask, TensorFlow, Keras, Scikit-learn, Pandas, NumPy, NLTK, LangGraph
AI / ML: Machine Learning, Natural Language Processing (NLP), Text Classification, TF-IDF, Cosine Similarity, LLMs, Hugging Face Transformers, Llama 3.2
Tools & Technologies: Git, Postman, Jupyter Notebook, Gradio, Groq API, REST APIs, Figma
CS Fundamentals: Data Structures & Algorithms, OOP, DBMS, System Design

Achievements

- Finalist – TechHorizon Hackathon 2025

2025

 - Selected among the top teams from **300+ participants** for developing AidConnect, an AI-powered NGO donation logistics platform using LLM-based vendor matching
- Smart India Hackathon Participant

2024

 - Built and presented an Emergency Vehicle Alert browser extension using GPS/V2X signal detection and Groq-accelerated inference at India’s national-level hackathon
- Winner – Project-Based Learning (PBL) Competition

Academics 2024

 - Led a team to design a Smart Home Automation System with real-time monitoring, enabling seamless appliance control via mobile and web; won the institute-level competition

Extra-Curricular

Content Creator: Creates content on filmmaking, storytelling, and AI productivity — sharing best practices to help people land tech roles
Self-Directed Learning: Regularly builds and ships AI-based automation tools and side projects; actively explores emerging LLM frameworks and agentic AI patterns
